328 Design GmbH wins Embraer Legacy ACARS® Contract

328 Design GmbH (328DO) recently won a Contract from a new customer to design, install and certify an Aircraft Communications Addressing and Reporting System (**ACARS®**) for an Embraer Legacy. The **ACARS®** is an ARINC registered system that has revolutionized air-to-ground communications and improved safety in the air. This system enables real-time messaging between pilot and air-traffic controller thus increasing efficiency of the communication, eliminating mis-communication due to poor radio conditions and reducing workload. Detailed reports such as for latest weather situation or engine reports can be sent to pilots to display or print.

328DO Head of Design Organisation, Joerg Gorkeant said, "This is another modification that shows how 328DO is making a name for itself as an avionic system solutions provider."

328DO offers many customized engineering solutions including SATCOM, Wifi access and other system enhancements for any aircraft type. The 328 Group has a portfolio of over 200 STC's (Supplementary Type Certificates) on aircraft types ranging from the Hawker to Airbus, as well as helicopter types.

End

About 328 Design GmbH:

328 Design GmbH is an EASA 21J Design Organisation (EASA.21J.438) with its Headquarters at Oberpfaffenhofen Airfield, near Munich, Germany. Currently the staff consists of over 40 Certification/Verification Engineers (CVE's) and Design Engineers and hiring is still ongoing. With its sister company 328 Support Services GmbH, a Part 145 Organisation, it can offer maintenance, manufacturing and installation of VIP interiors and other conversions such as medivac and/or other special mission projects.
