

CSI-328ALL-2013-01

Title: Landing Gear – Request for Overhaul Planning Data

Effectivity:

Dornier 328
 Type Certificate Data Sheet EASA.A.096
 Serial No.: All Aircraft

Information:

As discussed and promised during our last Operators Conference in December 2012, 328 Support Services GmbH (328 SSG) is offering support in Landing Gear overhaul planning. This was found necessary due to limited overhaul resources and spare parts to enable early procurement of a sufficient number of spare parts.

Early planning and securing slot(s) is highly recommended since an overhaul can take several months and the overhaul facilities have only limited capacity. Our recommendation is to contact an overhaul centre of your choice and allocate/secure a slot for your planned overhaul even far in advance.

The following actions have been identified:

- | | |
|--|-------------------------|
| 1. Compile list of available loaner gears | see Attachment 2 |
| 2. Collect overhaul forecasts from operators | 328 SSG with this paper |
| 3. Summarize and submit information to MBD | 328SSG after item 2. |
| 4. Statement from MBD on parts availability and support | MBD |
| 5. Publish CSI to transmit comprehensive information to all operators, MBD, overhaul centres and loaner gear providers | 328 SSG |

References:

Overhaul limits are listed in the Maintenance Requirements Document (MRD) and the Maintenance Planning Document (MPD). Be aware that this includes all Assemblies.

Note:

As per definition please note that a Main Landing Gear Assy comprises Main Body, Trailing Arm, Shock Absorber and Side Brace, a Nose Landing Gear Assy comprises Shock Strut and Drag Brace.

Request:

Please complete the attached Form (Attachment 1) and return it at your earliest convenience but not later than February 15, 2013 to the Global Support Center (GSC). If your company operates several aircraft please use one Form per aircraft.
